

Identifying New Zealand manufactured structural reinforcing mesh complying with AS/NZS 4671 and NZS 3101

To comply with the relevant Standards, all structural reinforcing mesh must be manufactured from 500E grade mesh feed and bundles must be tagged with identifying information. In addition, Fletcher Reinforcing tags every sheet with durable tags to identify the Standard, Mesh type and batch number for traceability purposes:

Fletcher Reinforcing uses mesh feed manufactured by Pacific Steel to AS/NZS 4671. Identification of the wire on site is achieved using the wire markings of a single dot and two dashes. The second dash in the 'Dot-Dash-Dash' marking, is a unique identifier of Pacific Steel's SEISMIC® 500E grade mesh feed:

Bar Marking Key:
  500E
 Pacific Steel

These marks are rolled in at intervals of every 300mm on both sides of the bar.
